

Industrial Security (Master)

Exercise Sheet – Section 07 Safety / Security Co-Engineering

Exercise 7.1 – Joint Workshop Plan

Plan a 2-day combined Cyber-HAZOP / SECOP workshop for a fictional chemical plant. Deliver: agenda, attendee list (with rationale per role), pre-read pack, deliverables.

Exercise 7.2 – Worked HAZOP Row

For a heat-exchanger node, produce three Cyber-HAZOP rows (guide word + parameter + cyber cause + safeguard + gap). Quality: each row points at a concrete vendor mechanism (not “add MFA somewhere”).

Exercise 7.3 – TRITON Re-engineering

Re-imagine the Schneider Triconex set-up the TRITON attackers found. What three design changes would have prevented the attack? Estimate cost and time-to-deploy for each.

Exercise 7.4 – Joint Risk Register Template

Design the schema for a single Process Hazard & Cyber-Hazard Register. Columns, owners, review cadence, link to the safety SIL verification file.
