

Industrial Security (Master)

Exercise Sheet – Section 08

Research Methods and Seminar Work

Exercise 8.1 – Research Proposal

Draft a 1-page proposal for a Master-thesis-sized OT-security research project. Cover: research question, prior work (3 citations), method, expected artefact, ethics + disclosure plan, evaluation criteria.

Exercise 8.2 – Method Selection

For three classes of question (case, measurement, design science), give one OT-security example each that you would tackle with that method. Justify the choice in 3 lines per example.

Exercise 8.3 – Reproducibility Audit

Pick one published ICS-security paper of your choice. Score its artefacts on a 0–5 scale across: code availability, data availability, container, README clarity, dependency pinning. Submit the score plus 1 paragraph commentary.

Exercise 8.4 – Mock Seminar Talk

Prepare a 10-minute talk on an ICS-security paper of your choice. Slides limit: 8. Include: problem, gap, method, headline result, limits, next step. Be ready for hostile questions.
