

Lab 01 – Where Is the Industrial Security?

Industrial Security (Bachelor)

• Maps to Section 01

• 30–45 min

LAB 01 **Goal**

Build your first map of the IT/OT spectrum and the cyber-physical interfaces around you. No tools required – pen and paper or any diagramming software.

 Step 1 – Spot the systems

List eight systems within walking distance of your classroom (or building): elevators, HVAC, badge readers, vending machines, lab equipment, fire panel, projectors, parking barriers, electricity meter, etc. For each, decide:

- IT, OT, or hybrid (IIoT)?
- Worst-case consequence of compromise?
- Who owns / maintains it?

 Step 2 – Draw a stakeholder map

Pick one of the eight systems and draw the stakeholder map (operator, owner, integrator, vendor, regulator). Mark which stakeholder cares about *availability*, *integrity*, *confidentiality* respectively.

 Step 3 – Reflection

Write 5–7 lines: which stakeholder would push back against a security control that interrupted normal operation, and why is that legitimate?

 Deliverable

Hand in: the table from Step 1, the stakeholder diagram from Step 2, and the reflection.

 Caution

Do not photograph, scan, or attempt to access any device discovered. This lab is observational only.
