

Lab 05 – Shodan Reconnaissance (Browser Only)

Industrial Security (Bachelor)

• Maps to Section 05

• 30 min

LAB 05

⚠ Caution

Read-only contract. Use Shodan only to observe what is publicly indexed. You will **not**:

- connect to, log into, fingerprint, or scan any discovered system;
- publish IPs, hostnames, or other identifying data;
- interact with any infrastructure that is not your own.

🎯 Goal

Quantify the scale of Internet-exposed industrial systems for one country and three product families. Reflect on responsibility and remedy.

✂ Step 1 – Account

Register a free account at <https://account.shodan.io/register>.

✂ Step 2 – Queries

Run each query in the Shodan web UI and record the approximate count plus three recurring banners:

- `port:502 country:DE`
- `"Siemens" port:102`
- `"Unitronics" port:20256`
- `"Schneider Electric" port:502`

📁 Deliverable

Hand in a 1-page reflection answering:

1. Who is responsible for each exposure (vendor, integrator, asset owner, ISP)?
2. What should an asset owner do today on discovery?
3. What can CERTs and regulators do at scale?

Do not include any IPs, hostnames, or organisation names.
