

Industrial Security (Master)

Exercise Sheet – Section 06

Threat Intelligence for OT

Exercise 6.1 – Campaign Brief

Pick one active OT-relevant campaign (Volt Typhoon, PIPEDREAM-related, Sandworm Indus-troyer2, CyberAv3ngers).

1. One-paragraph adversary profile.
2. ATT&CK for ICS technique mapping (at least 6 techniques).
3. Detection ideas (one per technique).
4. Sources and their bias.

Exercise 6.2 – Diamond Model Sketch

For the same campaign, fill the four vertices of the Diamond Model with concrete evidence (adversary, capability, infrastructure, victim). Cite a source for each.

Exercise 6.3 – Hunt Hypothesis

Translate one campaign-derived TTP into a concrete hypothesis your SOC could test this week. Write the data sources needed, the query (Splunk / KQL / Elastic / Zeek), and the expected output of a true positive.

Exercise 6.4 – STIX Snippet

Encode one IOC + one TTP from your campaign as STIX 2.1 JSON. Validate it via an online linter or `stix2-validator`.
