Solution Sheet – Section 06

Threat Intelligence for OT

Exercise 6.1 – Mark scheme

Strong briefs cite a primary source (CISA / Dragos / Microsoft) plus a secondary, and avoid copying threat-actor marketing names without context. ATT&CK mapping must point at specific technique IDs, not just tactic names.

Exercise 6.2 – Mark scheme

Award marks for: evidence at each vertex, source citation, and acknowledging unknowns explicitly (rather than guessing).

Exercise 6.3 – Mark scheme

A pass hypothesis is testable in the team's actual telemetry within a week. Bonus: the query distinguishes the TTP from baseline admin activity.

Exercise 6.4 – Mark scheme

Lint-clean STIX 2.1 JSON with at least an indicator + attack-pattern + relationship objects. The student should comment on what STIX cannot express well (process-context, OT-specific impact).
