

Industrial Security (Master)

Solution Sheet – Section 08

Research Methods and Seminar Work

Exercise 8.1 – Mark scheme

Strong proposals are testable in one Master-thesis cycle, have a clear evaluation criterion, and an explicit disclosure / ethics path. Deduct for vague “investigate cybersecurity in ...”.

Exercise 8.2 – Mark scheme

Award for matching example to method (e.g. measurement = a Shodan census; case = TRITON forensic walk-through; design science = a new GOOSE-signature tool).

Exercise 8.3 – Mark scheme

Honest assessment beats charitable inflation. Bonus marks for pointing at a fix (the student volunteers a PR or note).

Exercise 8.4 – Mark scheme

Pass requires a slide on limits + threats to validity, and at least one chart or screenshot from the paper. Bonus: a contrast slide showing where the paper’s results have aged poorly.
